

IndusCare+

A mobile-first insurance protection platform for IndusInd Bank customers

Insurance is bought once and forgotten

Problem Statement

Customers buy policies across scattered channels - agents, comparison apps, insurer apps - with no single view of what they own.

Coverage is explained in jargon; most policyholders can't say what their own policy actually covers.

Claims are the moment insurance matters most, yet they're the most stressful, paperwork-heavy part of the experience.

Renewals are treated as one-time transactions, not an ongoing relationship - so retention leaks every year.

An untapped opportunity inside the bank's own base

Market Insights & Opportunity Sizing

4%

India's insurance penetration vs. 7% global average - headroom is structural, not just competitive

~35M

IndusInd's addressable retail + digital banking customers who already trust the bank with their money

<3

policies the average insured Indian household holds, spread across unrelated providers with zero cross-visibility

Banks sit on income, spending, asset, and life-stage data that insurers never see. That data - not just distribution - is the real moat for a bank-led insurance platform.

Key trends: digitizing but experience-poor industry · rising claim-time distrust · digital-first customers expect proactive, self-serve service · banks are shifting from distributor to platform.

Everyone sells insurance; no one owns the relationship

Competitor Snapshot

Player	Strength	Gap IndusCare+ exploits
Policybazaar / aggregators	Wide product comparison	No banking data, no post-sale engagement, transactional only
Insurer apps (HDFC Ergo, ICICI Lombard)	Deep product expertise	Single-insurer silo - can't unify a customer's full portfolio
Other bancassurances (HDFC, ICICI Bank)	Existing bank distribution	Still sell-and-forget; no lifecycle engagement layer or AI assistance

Whitespace: a bank-owned, multi-insurer, lifecycle-first platform that layers proactive service on top of transactions.

Designing for one clear persona first

Target User Persona

Rhea Malhotra

29 · Product Marketer, Bengaluru

IndusInd salary account holder · owns a two-wheeler and a health policy bought via an agent she's since lost touch with · pays premiums but has never filed a claim

"I know I'm covered for something. I just don't know for what."

Goals

See every policy in one place; renew without last-minute panic; understand coverage in plain language

Frustrations

Forgets renewal dates; can't compare her existing cover to alternatives; dreads the idea of ever filing a claim

Digital behavior

Already checks her IndusInd app weekly for spends and investments - insurance is a natural extension, not a new habit

From a policy you bought once, to a protection layer that works for you every day.

One view

Every policy across every insurer, visible and understandable in one bank app

Proactive, not reactive

Renewal nudges, coverage gap alerts, and life-stage recommendations before customers ask

Effortless claims

Guided, document-light claim filing with real-time status, inside the app customers already trust

Health, Motor and Home first - Expand Later

Product Scope & Justification

Health Insurance

Highest emotional stakes and claim frequency - the category that builds or breaks trust fastest

Motor Insurance

Highest purchase frequency and easiest to digitize end-to-end, including inspection and renewal

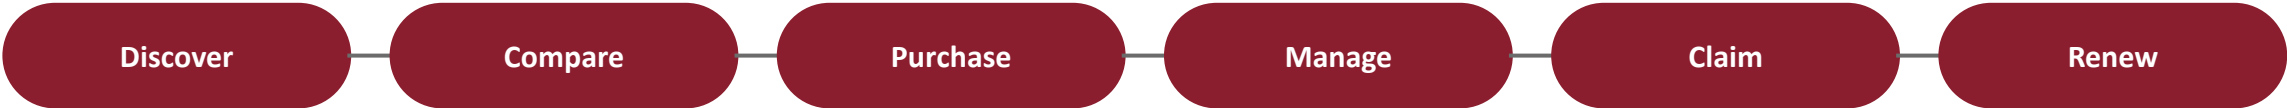

Home Insurance

Natural cross-sell for IndusInd's home-loan customers; near-zero penetration today

Travel, Pet, Cyber and Rental insurance become Phase 2 cross-sell modules once the core lifecycle engine (discovery, purchase, claims, renewal) is proven on these three.

From unaware to advocate

End-to-End User Journey

Sees a coverage-gap nudge on the home screen based on spending/life data	Views 2-3 relevant plans in plain language, side by side, no jargon	Buys in under 5 taps using existing KYC - no repeat paperwork	Dashboard shows all policies, renewal dates, and coverage at a glance	Guided claim flow with photo upload and live status tracking	Auto-reminded 30/15/1 days out with a one-tap renew option
--	---	---	---	--	--

Two flows carry most of the product value

Key User Flows

Flow A — Buy a policy

- 1 Home nudge or search
- 2 Answer 3-4 profile questions
- 3 Compare recommended plans
- 4 Select plan & pay via linked account
- 5 Instant e-policy in IndusCare+ dashboard

Flow B — File a claim

- 1 Tap 'File a Claim' from policy card
- 2 Select incident type, upload photos/docs
- 3 AI pre-check flags missing info instantly
- 4 Claim submitted with tracking ID
- 5 Push updates at every status change

What ships first, and why

Feature Prioritization (MoSCoW)

Must Have

- Unified policy dashboard
- Buy flow (Health/Motor/Home)
- Renewal reminders
- Digital claim filing & tracking

Should Have

- AI chat assistant for coverage Q&A
- Plan comparison engine
- Document vault (auto-fetched via DigiLocker/KYC)

Could Have

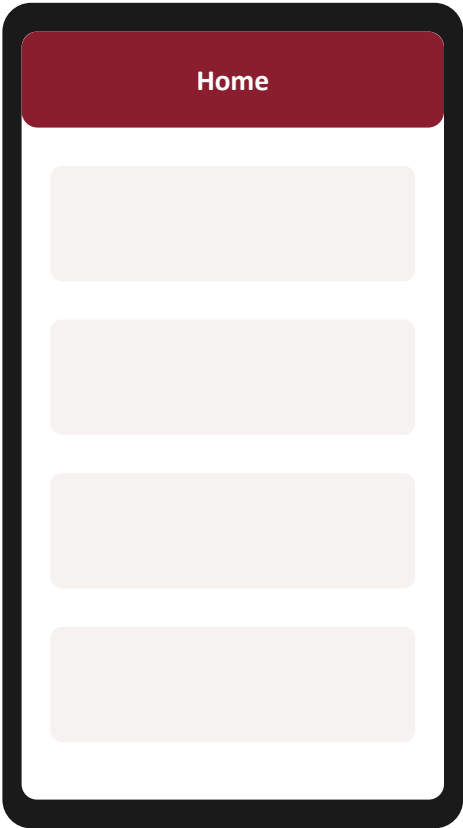

- Ecosystem add-ons (roadside assistance, teleconsultation)
- Family policy grouping
- Gamified wellness rewards

Won't Have (v1)

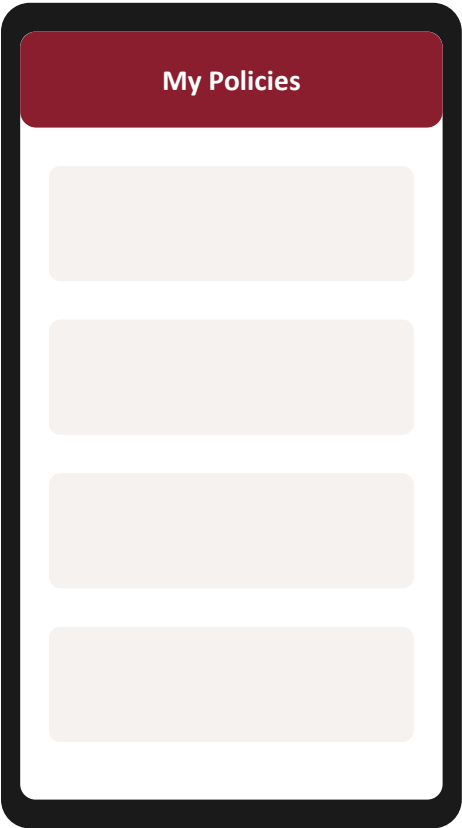

- Underwriting/pricing engine of our own
- Cyber/Pet/Travel insurance
- Fully automated claim settlement

Four core screens carry the experience

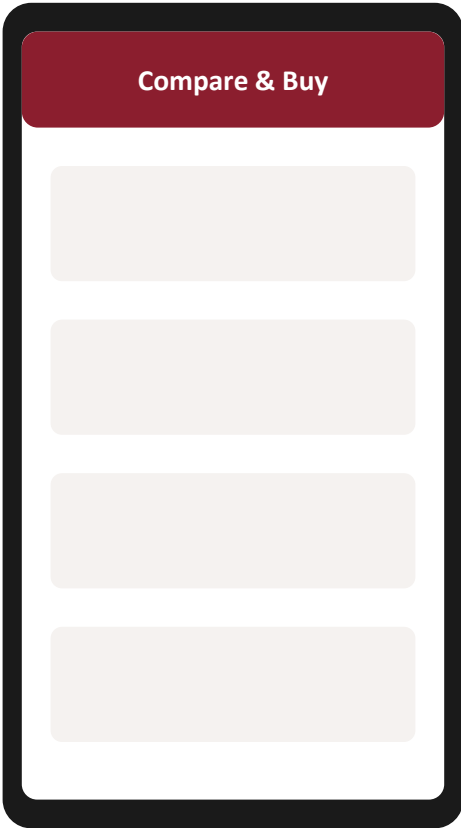

Prototype Walkthrough (see clickable prototype for full flow)

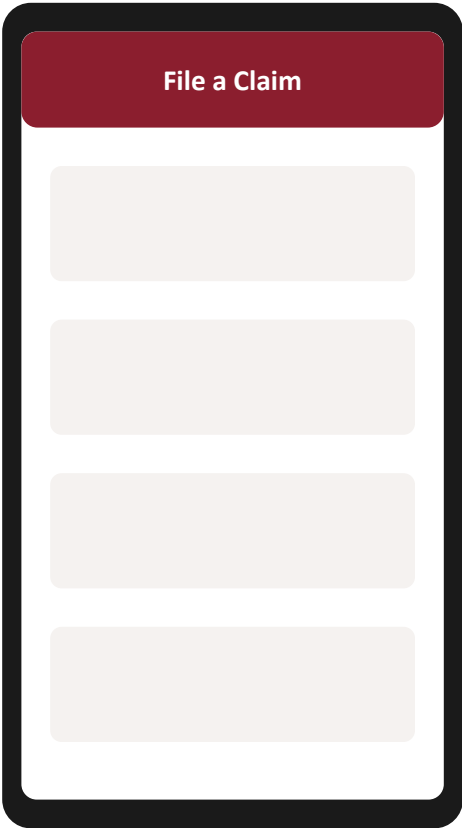

Coverage snapshot + one proactive nudge, styled like the existing IndusInd home screen

Every policy, every insurer, one scroll - status, premium, renewal date at a glance

Plain-language plan cards, side-by-side, with a single primary CTA

Step-based form with progress bar, photo upload, and live status timeline

One number the whole team optimizes for

Success Metrics & North Star

North Star Metric: Active Protected Customers

Customers with 2+ active policies AND at least one app session in the last 30 days

Adoption

% of banking customers with 1+ IndusCare+ policy

Cross-sell

Avg. policies per customer; Health-Motor-Home attach rate

Retention

Renewal rate; policy lapse rate within 30 days of expiry

Engagement

Monthly active users on dashboard; claim NPS

Efficiency

Avg. claim resolution time; % claims filed without agent support

Growth

Policy premium volume via app vs. traditional channels

Launch inside the bank, then earn attention outside it

Go-To-Market Strategy

Phase 1 : Soft Launch

Roll out to existing IndusInd app users via in-app banner + relationship-manager outreach to top-tier savings/salary accounts

Phase 2 : Cross-sell Push

Trigger targeted nudges off real banking events: home loan disbursal -> home insurance, car loan -> motor insurance

Phase 3 : Retention Loop

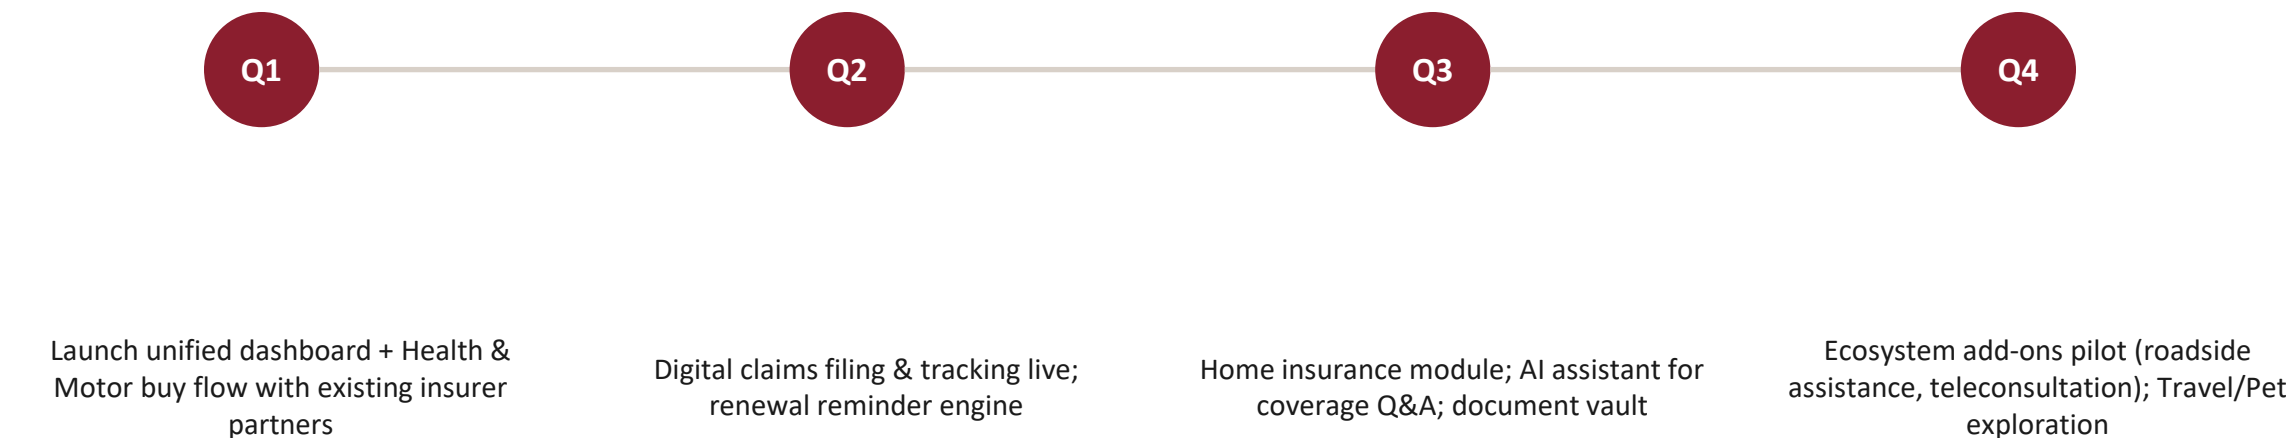

Renewal-season campaigns, claim-experience referrals, and loyalty perks tied to IndusInd's existing rewards program

Phase 4 : Category Expansion

Open travel, pet, and cyber insurance once the core lifecycle engine has proven engagement and claim-satisfaction metrics

12 months, four milestones

Product Roadmap

What has to be true, and what could go wrong

Assumptions, Risks & Bonus Directions

Key Assumptions

- Existing insurer partners will expose APIs for real-time policy/claim data
- Customers trust their bank enough to manage insurance in the same app
- KYC/DigiLocker integration removes most purchase friction

Key Risks

- IRDAI bancassurance & data-sharing compliance across insurer tie-ups
- Low initial claims volume makes AI pre-check hard to trust early on
- Cannibalizing branch/agent-led sales without a clear channel strategy

Bonus Direction: AI-Powered Assistance

An in-app assistant answers 'what does my policy cover' questions in plain language, pre-fills claim forms from uploaded photos/documents, and flags likely fraud patterns (duplicate claims, mismatched timestamps) before human review - reducing both customer effort and claim leakage.
